Innova-Mass[®] Model 240 & 241

Description

Sierra Instruments' Innova-Mass[®] Multivariable mass vortex flow meter provides a reading of up to five process parameters from a single entry point in the pipeline. The meter can measure the fluid's velocity, temperature, and pressure and calculate mass flow rate, volumetric flow rate and density. Sensing all process parameters at a single location in one integrated meter greatly improves measurement accuracy and reduces total installed cost.

The Innova-Mass Model 240 in-line meters are available in 0.5, 0.75, 1, 1.5, 2, 3, 4, 6 and 8-inch sizes with ANSI or DN16 flanges or wafer flow bodies. The Series 241 insertion meters can be used on pipe sizes from two inches and greater. Optional "hot-tap" hardware including packing gland probe seal, retractor, and isolation valves is also available.

Differential Pressure Requirements, ΔP

Permanent pressure loss of in-line meters for air at 68°F (20°C) and 14.70 psi (1.104 bara).
 Permanent pressure loss of in-line meters for water at 68°F (20°C).

Linear Range

Smart electronics corrects for lower flow down to a Reynolds number of 5,000. The Reynolds number is calculated using the fluid's actual temperature and pressure monitored by the meter. Rangeability depends on the fluid, process connections and pipe size. Consult factory for your application. Velocity rangeability under ideal conditions is as follows:

Liquids 30:1	1 foot per second velocity minimum 30 feet per second velocity maximum
Gases 30:1	10 feet per second velocity minimum 300 feet per second velocity maximum
